DETAILED ACTION

EXAMINER'S AMENDMENT

1. The following is an Examiner's statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose, make obvious, or otherwise suggest the structure of the applicant's prediction program, prediction apparatus, and prediction method together with the other limitations of the independent claims.

The dependent claims being further limiting and definite are also allowable. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Authorization for this examiner's amendment was given in an interview with Samuel S. Lee on November 20, 2007.

AMENDMENT TO THE CLAIMS:

Claims 1, 15, 29, and 34-35 have been amended. Claims 1-29 and 34-35 remain pending in the application.

WHAT IS CLAIMED IS:

1 and 34. (Currently Amended) A repository system for media publishing, comprising:
a plurality of storage devices configured to store a plurality of media items, the plurality of storage devices including a first storage device and a second storage device,
the first storage device configured to store a first type of media items, and
the second device configured to store a second type of media items ; and
wherein the first type of media items is defined by a series of publishing variable
including:

a format, a bit rate, a communication protocol, physical medium, digital right management information associated with media items, and an encoding type and compression technique used to reduce the physical size of the media items; and

wherein the second type of media items ~~is~~ is defined by the same series of publishing variables with at least one of the publishing variables having a different value from that of the first type of media items; and

metadata information relating to the plurality of media items stored in said plurality of storage devices,

wherein said metadata information enables hierarchical organization of the plurality of media items so that the media items are easily accessed, moved, added, and deleted.

15, 29, and 35. (Currently Amended) A method of providing storage for media items in media publishing, comprising:

storing a first type of media items in a first storage device;

storing a second type of media items in a second storage device;

wherein the first type of media items is defined by a series of publishing variable including:

a format, a bit rate, a communication protocol, physical medium, digital right management information associated with media items, and an encoding type and compression technique used to reduce the physical size of the media items; and

Art Unit: 2164

wherein the second type of media items ~~is~~ is defined by the same series of publishing variables with at least one of the publishing variables having a different value from that of the first type of media items; and

relating first metadata information to the first type of media items; and

relating second metadata information to the second type of media items, wherein said first and second metadata information enable hierarchical organization of the media items so that the media items are easily accessed, moved, added, and deleted.

Reasons for Allowance

2. Claims 1-29 and 34-35 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: the prior arts of records, neither anticipates nor renders obvious the following limitations as claimed:

As to claims 1 and 34, the prior art of records fail to anticipate or suggest wherein the first type of media items is defined by a series of publishing variable including:

a format, a bit rate, a communication protocol, physical medium, digital right management information associated with media items, and an encoding type and compression technique used to reduce the physical size of the media items; and

wherein the second type of media items is defined by the same series of publishing variables with at least one of the publishing variables having a different value from that of the first type of media items; and

Art Unit: 2164

metadata information relating to the plurality of media items stored in said plurality of storage devices,

wherein said metadata information enables hierarchical organization of the plurality of media items so that the media items are easily accessed, moved, added, and deleted, together with the other limitations of the independent claims.

As to claims 15, 29, and 35, the prior art of records fail to anticipate or suggest A method of providing storage for media items in media publishing, comprising:

storing a first type of media items in a first storage device;

storing a second type of media items in a second storage device;

wherein the first type of media items is defined by a series of publishing variable including:

a format, a bit rate, a communication protocol, physical medium, digital right management information associated with media items, and an encoding type and compression technique used to reduce the physical size of the media items; and

wherein the second type of media items is defined by the same series of publishing variables with at least one of the publishing variables having a different value from that of the first type of media items; and

relating first metadata information to the first type of media items; and

relating second metadata information to the second type of media items; wherein said first and second metadata information enable hierarchical organization of the media items so that

Art Unit: 2164

the media items are easily accessed, moved, added, and deleted, together with the other limitations of the independent claims.
